- **Modules Implementation**

- **Patient Management**

- Patient registration with details like name, age, gender, and contact information.

- View, update, and delete patient records.

- **Doctor Management**

- Register and manage doctors with specialization, experience, and availability.

- List doctors by specialization.

- **Appointment Scheduling**

- Book, view, and cancel appointments between patients and doctors.

- Check availability of doctors before booking.

- **Treatment Record**

- Add treatment details after appointments.

- Maintain history of treatments for each patient.

- **Technologies Used**

- Programming Language: Java
 - Database: MySQL
 - IDE: Eclipse
 - Design Pattern: DAO (Data Access Object)

- **DAO Interfaces & Implementations**

- HospitalService & HospitalServiceImpl

- **Exception Handling**

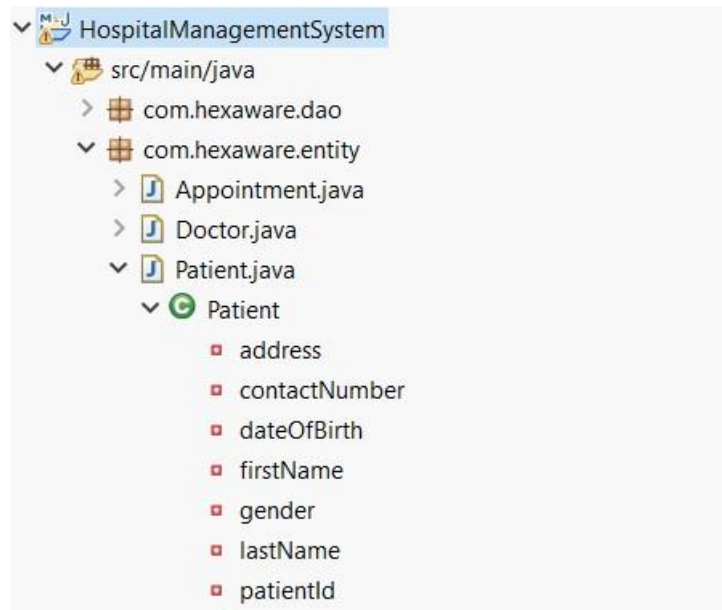

- Custom exceptions created:
 - PatientNotFoundException
 - DoctorNotFoundException
 - AppointmentNotFoundException
 - Used try-catch blocks to handle SQL and input errors gracefully.

- **Utility Classes**

- DBConnectionUtil – Manages database connections.
 - ValidationUtil – Input validations.
 - DateUtil – Formats and parses date inputs.

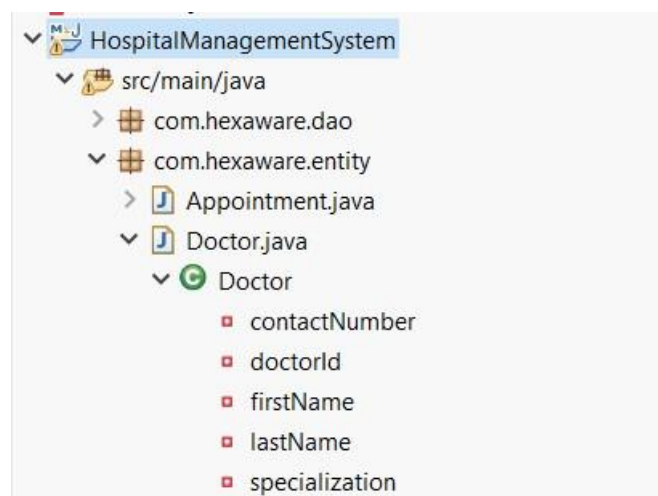

1. Define 'Patient' class with the following confidential attributes:

- a. patientId
- b. firstName
- c. lastName;
- d. dateOfBirth
- e. gender
- f. contactNumber
- g. address

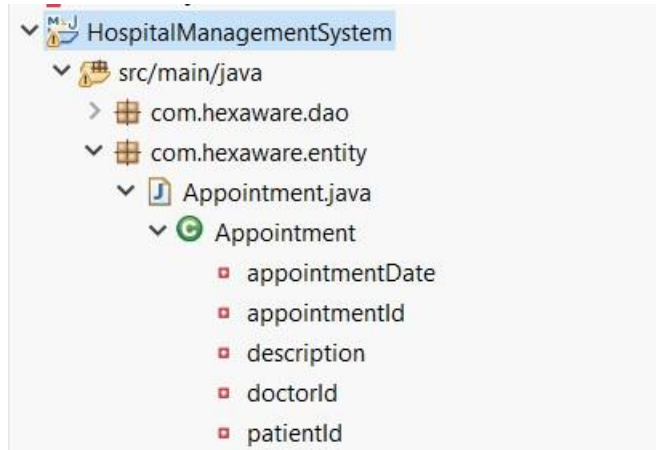

2. Define 'Doctor' class with the following confidential attributes:

- a. doctorId
- b. firstName
- c. lastName
- d. specialization
- e. contactNumber

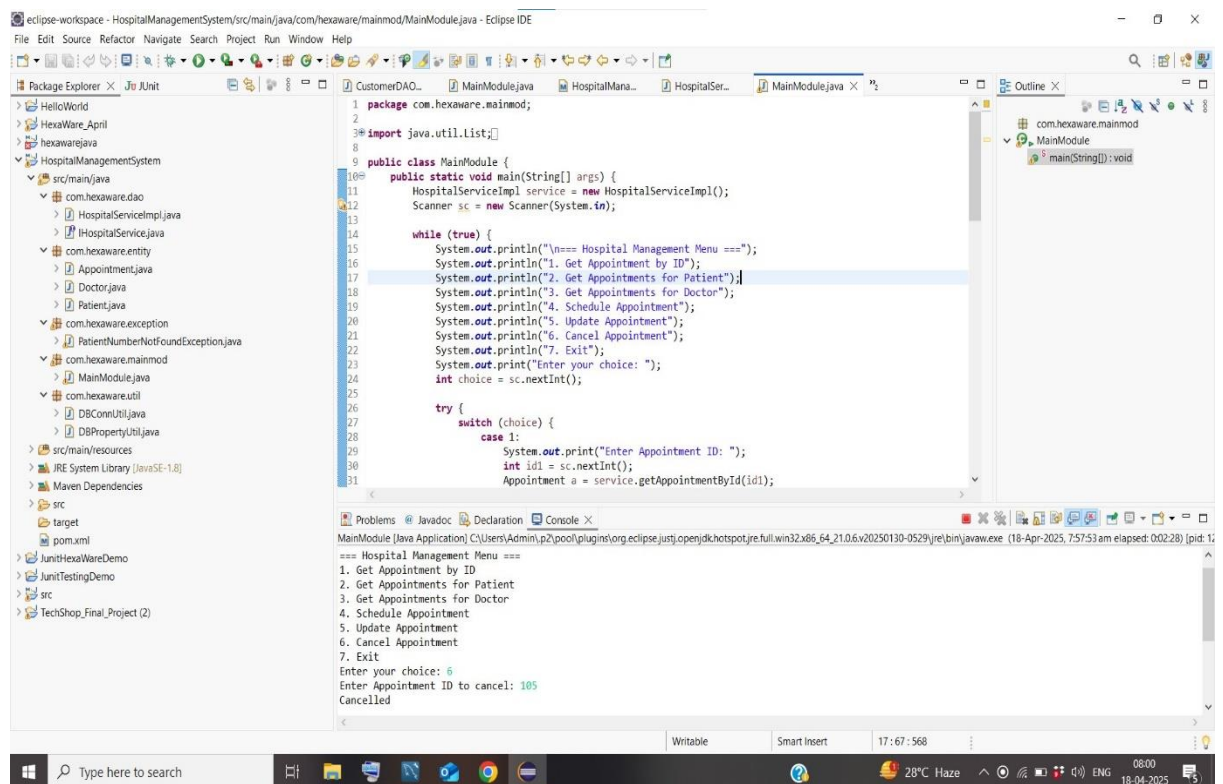

3. Appointment Class:

- a. appointmentId
- b. patientId
- c. doctorId
- d. appointmentDate
- e. description

• Project Outputs:

- **Get Appointment by ID**

```
